Description While running a Comprehensive Performance Test (CPT) for the record, while installed on the Spacecraft (at LASP), the instrument exhibited an anomalous behavior. The instrument collects the incorrect number of data packages (extra science packets) relative to the issued command. This has been intermittent, sometimes acquiring 1 extra packet, sometimes 2 extra packets, and sometimes no extra packets. Anomaly was also noticed when using the EMIRS_ACQ command (in Section 4.3.1, step b). Anomaly was also noticed during Aliveness testing.
